OUR ASSOCIATION...

ICRI, the only association in the concrete industry devoted solely to repair and restoration, publishes a bimonthly magazine and technical guidelines for concrete repair, and cosponsors the World of Concrete. Local chapters provide regional networking opportunities. Worldwide membership include contractors, manufacturers, engineers, distributors, owners, and other professionals with a common goal: prolonging the useful life of concrete through quality repair, restoration, and protection.

OUR MISSION...

The mission of the International Concrete Repair Institute is to be a leading resource for education and information to improve the quality of repair, restoration, and protection of concrete and other structures in accordance with consensus criteria.

LETTER FROM OUR PRESIDENT

As I assume the role of chapter president here in 2018, I reflect back on how I have watched this chapter grow and change over the past several years. One of the things that impressed me the most, that I almost didn't believe when I first joined ICRI, is the way that competitors work together as one on goals for the organization and the chapter. I found it very interesting that we can meet as competitors in a pre-bid meeting hours before a board meeting and then work side by side on chapter projects, committees and meetings.

It's like ICRI is a neutral ground where information, experience and technology is shared openly for the good of the industry and organization! Having served on the board and committees, I've learned firsthand the importance of maintaining "the balance" of specifiers, suppliers and contractors, and the input, opinions and reasoning from all three groups. That mix and that balance is critical to our success.

If I could say one thing to each of the members in this chapter, it would be that you're welcome here in this organization. Your ideas, thoughts and opinions about the direction of the industry will be openly received and your involvement is what keeps us moving forward.

I would like to express my gratitude to the Board of Directors who fulfilled their terms and are passing on the reins to the three new directors. Thank you to the outgoing directors and board members and welcome to the new board members and directors. I look forward to the continuing contributions and involvement of past board members and to working with the new ones.

I would like to invite any member to sit in on the board and committee meetings and to get involved!!

The board meetings will all be on the calendar as well as most of the committee meetings. I would also highly recommend attending a National Convention. Several years back, I went as a delegate and I "got hooked"! The networking, knowledge and idea sharing that engaged me so much in the Chicago Chapter is multiplied by "Ten" at the National Convention with members from all over the country. I've joined some national committees and have been attending ever since my first one.

In closing I would like to say that one of my primary goals this year is to increase the involvement of students moving into our industry. I feel we need to reach out to the students and show them all the potential of the restoration industry.

As we all know, our future is in the youth.

Sincerely,

Jim Fadellin
ICRI Chicago Chapter President

CHICAGO CHAPTER 2018 OFFICERS & DIRECTORS

NOVEMBER DINNER MEETING HIGHLIGHTS

Are you Still Making Mistakes in YOUR Concrete Repairs??

If you are, you should have attended the Chicago Chapter's November Dinner Meeting & Educational Seminar, where Pete Popovic (WJE) led an interesting session discussing many of the potential pitfalls that we all strive to avoid in our projects.

Pete's extensive knowledge and experience in our industry provided great insight and perspective on many of the issues that face engineers, contractors and material suppliers when working to extend the service life of concrete structures.

Thanks again to Mr. Popovic and the ICRI Chicago Chapter Programs Committee for providing another great educational opportunity for our members. Be sure to check out this year's meetings to further your knowledge and benefit from the experience represented in your ICRI Chicago Chapter.

HOLIDAY SOCIAL HIGHLIGHTS

Holiday Fun & Games with the Chicago Chapter

On December 7, the Chicago Chapter held its annual Holiday Party, bringing friends and industry partners together in celebration of the season and our 2017 accomplishments! All in attendance enjoyed great pizza, games and a maybe few beverages(?) at Pyramid Pizza in Addison.

2017 was another interesting year in the concrete repair industry, so the break in action before the holiday crunch provided a welcome opportunity to step away and share in reflection of projects past.

Thanks to the ICRI Chicago Chapter Social Activities Committee and staff at Pyramid Pizza for another very successful event!

ICRI SPOTLIGHT: 2017 PROJECT AWARD

The Harrison-Dever Water Crib Concrete Restoration Project was a unique project with tall challenges that needed to be meticulously planned, clearly communicated, and flawlessly executed.

About the Harrison-Dever Water Crib:

The Carter H. Harrison Crib replaced the Two-Mile Crib in 1900, which was later replaced by the William E. Dever Crib built alongside it in 1935, for the purpose of moving fresh water into the city from the lake. Around the turn of the century, the Harrison-Dever Water Crib and others like it were constructed about two miles offshore to pump fresh water into the city, as the Chicago River and immediate lake shore were too polluted to supply Chicago with drinking water. The city has had nine permanent cribs of which six are still standing and two are in active use with Harrison-Dever being one of them. The cribs were manned twenty-four hours a day, seven days a week by water department employees until the early 1990s. Today, they are only manned twenty-four hours a day during the winter months when the weather is extremely cold. Measures had to be taken to protect the living spaces of the Department of Water employees who sometimes call the crib their home for up to weeks at a time.

Project Work Scope:

The project was a multiple trade restoration project contracted by F.H. Paschen, S.N. Nielsen & Associates for the City of Chicago Department of Water. LS Contracting Group was contracted to perform demolition and replacement of the concrete promenade slabs, curbs, gutters, and two sets of concrete stairs on the same promenade that run circular on the perimeter of the water crib. LS Contracting Group was also contracted to replace the concrete stairs that lead from the crib entrance down to the lake level. Rounding out our contract LS Contracting Group also installed a new promenade trench drain and a new ice shoot drain. The majority of the concrete restoration work was performed with ready-mix concrete and the remainder was performed with a SikaTop 111 repair mortar.

Project Challenges and Logistics:

The transportation of employees, materials, and equipment out to the project site two and a half miles offshore in Lake Michigan presented a daily challenge for this project. There were two methods of transportation to be utilized, a "crew boat" and a barge. LS Contracting Group used both methods throughout the project to get materials and equipment to the project site.

at the
Erie Café
in Chicago.

ICRI SPOTLIGHT: 2017 PROJECT AWARD (CONTINUED)**Crew Boat:**

The general contractor provided a “crew boat” to all contractors to send the employees, small material, and equipment out to the crib and back every day. This required a considerable amount of coordination and patience for all contractors and the general contractor. Material and equipment were loaded on to the crew boat using a lull every morning starting at 5:00 a.m. The boat departed promptly every morning at 6:00 a.m. for the crib. If anyone was late, they were not permitted to work that day. The boat departed from the Jardine Water Purification Plant in Chicago just north of Navy Pier and the trip took approximately forty-five minutes each way. All contractors were expected to work twelve-hour days – ten of which at the crib itself. The crew boat returned to the Jardine facility daily at 6:15 p.m. Special trips had to be scheduled far ahead of time. Crews could only return early if they were absolutely out of work for the day.

Barge:

The heavy lifting of material and equipment for this project was performed utilizing a Manitowoc crane on a barge. The barge and crane were brought in and out from the crib daily in order to load new material and equipment on the barge every morning. Pallets of bag mix concrete and air compressors were brought in and out via the barge while concrete debris was shipped back in super sacks on the barge. The barge was only scheduled to be onsite for two months of the project; careful coordination and planning were essential to ensure all heavy work scope items were performed during that two-month window. Extending the barge time was almost impossible due to the barge’s other commitments.

Project Solutions:

One of largest challenges for LS Contracting Group during this project was pouring the ready-mix concrete two and a half miles offshore in Lake Michigan. To accomplish this, concrete trucks were driven onto the barge, loaded, and shipped out to the water crib on the day of the pour. This required months of research, planning, coordination, and communication by all parties involved. The LS Contracting Group staff took the lead with regards to coordination, but every party involved had to do their part to make this happen. Companies involved included BASF, Prairie Material, the barge company and the crane operator, F.H. Paschen, and LS Contracting Group. These companies had many people involved including superintendents, project managers, safety staff, quality control, chemists, insurance/risk management, and marketing departments.

ICRI SPOTLIGHT: 2017 PROJECT AWARD (CONTINUED)

To guarantee a successful concrete pour, the setting time of the ready-mix had to be delayed to account for the duration of transportation to the crib. Prairie Material and BASF agreed upon the use of an admixture which renders the ready-mix concrete dormant for a certain amount of time. Fine tuning the dormancy period required several test batches and dry runs to adjust the amount of admixture. Additional planning and coordination by LS Contracting Group and Prairie Material was required to ensure that the ready mix trucks were loaded onto the barges and shipped to the crib within the precise time window developed during test batches. Any miscalculation or miscommunication may have caused the project team to go over the specified load time. Once the trucks were at the water crib the concrete was bucketed in by a crane and LS Contracting Group crews placed and finished it. The pour went off without a hitch.

The project may have been challenging but the LS Contracting Group team rose to the occasion to bring the project in on schedule, safely, and within budget.

WORLD OF CONCRETE 2018

The annual World of Concrete Show was held this January 23-26th in Las Vegas, Nevada. The World of Concrete is the industry's only annual international event dedicated to the commercial concrete and masonry construction industries. The World of Concrete was first held in 1975, but has grown in popularity and attendance over the years to become one of the most well attended conventions in Las Vegas. Since its inception, the World of Concrete has increased its exhibit space almost 4 times over, exhibitors almost 20 times over, and attendees almost 40 times over.

WORLD OF CONCRETE

WORLD OF CONCRETE 2018
EXHIBITS: JANUARY 23-26
SEMINARS: 22-26
LAS VEGAS CONVENTION CENTER

The Chicago Chapter of the ICRI was well represented this year as the members in attendance enjoyed the ICRI kickoff party followed by the main event which included new technology showcases, demonstrations and education programs by the industry's foremost companies and professionals.
