## OUR ASSOCIATION...

ICRI, the only association in the concrete industry devoted solely to repair and restoration, publishes a bimonthly magazine and technical guidelines for concrete repair, and cosponsors the World of Concrete. Local chapters provide regional networking opportunities. Worldwide membership include contractors, manufacturers, engineers, distributors, owners, and other professionals with a common goal: prolonging the useful life of concrete through quality repair, restoration, and protection.

## OUR MISSION...

The mission of the International Concrete Repair Institute is to be a leading resource for education and information to improve the quality of repair, restoration, and protection of concrete and other structures in accordance with consensus criteria.

## LETTER FROM OUR PRESIDENT

As I am writing this letter, Governor Pritzker's stay-at-home executive order just went into effect in Illinois in response to the outbreak of Coronavirus Disease (COVID-19).

Hopefully, by the time you read this, the risk of catching the disease has lessened. However, at this point, there is much uncertainty. In addition to concerns of becoming infected or having a loved one contract the disease, we are not sure how else our daily lives will be affected. Most of us know someone who is temporarily out of work due to this pandemic. All of us are negatively impacted by the

situation to some extent. Nevertheless, I am optimistic, and hopefully we will not only endure this adversity, but somehow better ourselves as a society and an industry. We always have, and we always will. We will improve ways to telecommunicate. We will increase our efficiency from working remotely. We will develop in ways which will make us wonder why we didn't think of that before. But for now, we need to be smart, and take appropriate precautions so we can move forward.

Due to the pandemic concerns, our ICRI National Spring Convention in Vancouver British Columbia was cancelled. We will keep you posted on the status of our upcoming Chicago Chapter events. Although we are not be able to meet face-to-face at this time, our Board and committee members are still working hard. In addition to preparing this publication, we have improved our website. You are now able to post employment opportunities on ICRI-Chicago's LinkedIn page at no charge, and also purchase ICRI-Chicago apparel by visiting [icrichicago.org](http://icrichicago.org).

Our Student Outreach Committee is accepting applications for the Leland "Lee" Sizemore Memorial Scholarship. Applications are due in early May. Let's get the word out to those deserving students you know.

It's not going to be easy, but we will get through these tough times. I'm confident we will gain from this experience, and our recovery will be strong. Hang in there and stay safe. Thank you.

Sincerely,

*Mike Wiscons*

WORLD OF CONCRETE HIGHLIGHTS

With a substantial turnout and larger footprint than recent years, World of Concrete 2020 did a wonderful job of bringing together Design Professionals, Material Suppliers, Contractors and other industry professionals from around the world. The ICRI kickoff party was a great start to the week in Las Vegas. Industry colleagues and friends enjoyed a night of mingling and networking while surrounded by stunning views of the Strip and the surrounding city from the Stratosphere Observation Deck. As always, the Chicago Chapter was well represented by multiple board members, chapter members and colleagues.

The convention provided a good mix of educational classes and seminars, hands-on demonstrations, and exhibits showcasing the newest equipment and materials. ICRI had a great exhibit, promoting their educational materials and certifications. Other industry organizations that we have partnered with in the past, such as ACI and ASA, were also well-represented. Whether attendees were looking to advance their career with certifications, buy the newest tools or just witness the interesting aspects of the industry that lie outside their day-to-day work, they could find it all at World of Concrete. We can't wait to see what they have in store for 2021.

## ICRI SPOTLIGHT: 2019 PROJECT AWARDS

The ICRI Chicago Chapter February dinner meeting was packed from wall to wall to hear presentations on the two finalists for the 2019 Project of the Year Award. The Project of the Year winner was the rehabilitation of the Weiss Memorial Hospital Parking Structure with Walker Consultants providing the repair design and Golf Construction performing the repairs. The slide show was presented by Dan Moser and John Morgan from Walker Consultants and Will Markunas from Golf Construction. The Award for Merit project was the facade restoration of the Groupon Building 600 W. Chicago, 900 N. Kingsbury/950 N. Kingsbury with Klein & Hoffman providing the repair design and Bulley & Andrews Masonry Restoration performing the repairs. The slide show was presented by Allysia Youngquist, Allison McSherry, Brian Mathus and Chris Mojica from Klein & Hoffman, and Chris Thomas and Cade Conner from Bulley & Andrews Masonry Restoration. Both presentations were informative and discussed the design, construction and management issues encountered during the rehabilitation of each structure. More in-depth discussions of the projects are presented below

### 2019 PROJECT OF THE YEAR

#### Weiss Memorial Hospital Parking Structure Maintenance Repairs

Engineer/Architect: Walker Consultants  
Contractor: Golf Construction

#### Structure Description:

The Weiss Memorial Hospital Parking Structure is a 6-level, 4-bay wide cast-in-place post-tensioned concrete parking structure originally constructed in 1976. The garage plan dimensions are 231 feet by 248 feet and provides approximately 965 parking spaces for visitors, patients, and staff. The first level is slab-on-ground, while the remaining 5 elevated levels are post-tensioned beams and slabs supported by cast-in-place columns.

#### Project Work Scope:

Walker Consultants performed a condition assessment of the parking garage to document the physical condition of representative structural elements, including visual observations, hammer sounding and chain dragging. Significant distress was observed at the pour strips and the adjacent concrete at the post-tensioned end anchors. Tension testing of the existing tendons, removal of tendons for inspection, and concrete openings near the tendon high points revealed widespread tendon distress requiring significant repairs to the post-tensioning slab system. The tensioning within the concrete beams appeared to be less affected. Due to high projected repair costs associated with de-tensioning the slab post-tensioning, repairing delaminated slab concrete at the tendon anchorage zones, repairing corroded tendons, and re-stressing the tendons, Walker considered other conceptual repair options in order to minimize the significant repair costs associated with repairing the hidden tendon distress and concrete deterioration within the slabs. Walker ultimately recommended to the owner that the existing floor slab post-tensioning system be abandoned, and new steel beams be installed directly below the slab and bolted to the face of the existing post-tensioned concrete beams.

Not only were new steel beams needed throughout the structure to support the floor slabs, but the appropriated funds for the project were required to be spent within the 2019 calendar year. Therefore, the garage repair work needed to be completed within the remaining 5½ months before the end of the year. Repairs were not limited to only the concrete patching repairs and installation of new steel beams, the repair work scope also included new doors, expansion joints, facade restoration, painting of entire facade, new barrier cable system, fireproofing the new steel beams, epoxy overlay, new drains and plumbing, a new traffic bearing membrane, concrete sealer, new signage package and new LED lighting systems.

#### Repair Execution:

With all the various repairs to be performed in the same locations and the linear nature of the work involved, detailed phasing was required to meet the schedule and perform the work safely. Each new steel beam required field measurements prior to fabrication due to the varied lengths within the garage. Scanning of the existing post-tensioned beam reinforcement and tendons was required at each new steel beam end to ensure the anchor installation would not compromise the beam's strength.

The concrete work on the project totaled just under 12,000 square feet of partial depth and just under 22,000 square feet of full depth repairs. Multiple partial enclosures were required to perform this work throughout the cold months. Eventually, the entire garage was enclosed tightly, and a temporary dry heat system was utilized to keep the ambient and slab temperatures at an average of 55-65 degrees throughout the garage. These temperatures were required to properly install and cure the fire proofing, sealants and waterproofing membranes.

The parking garage was completed on schedule and opened on January 1, 2020. Daily punch lists were derived, updated and diligently completed by all trades within the last few weeks of the project. The project team cooperation (owner, engineer/ architect, general contractor, subcontractors, suppliers, operations staff, and maintenance team) was key to the success of this repair program.

## 2019 AWARD OF MERIT

Groupon Building 600 W. Chicago, 900 N. Kingsbury/950 N. Kingsbury

Engineer/Architect: Klein & Hoffmann

Contractor: Bulley & Andrews Masonry Restoration

### Structure Description:

The Groupon Building is a 1.25 million square foot building located along the North Branch of the Chicago River. The building is listed as a National Historic Landmark due to its significance in the history of American retailing and its association with A. Montgomery Ward. The building was constructed in 1908 and was a warehouse and office building for the nation's first mail-order catalog business. At the time this structure was completed, this building was the largest concrete structure in the world. The 8-story 600-foot-long cast-in-place concrete curved structure hugs the riverbank, is trapezoidal shaped, and its facade consists of exposed cast-in-place concrete, brick masonry spandrel beams and ornamental terra cotta filled with concrete.

### Project Work Scope

Klein & Hoffman performed a condition survey of the entire building facade to determine the extent of distress. The exposed concrete and masonry exhibited cracking, delaminations and spalls, while the facade fenestration sealants were failed. Based on the condition survey results, isolated concrete, masonry and sealant repairs were prepared.

Due to the scale of the project, and the high sensitivity of the building's tenants, Bulley & Andrews Masonry Restoration utilized a combination of 22 swing stages and 10 platforms on masts to access the exterior facade to perform repairs. In total, 72 swing stage drops were made on the building, approximately 850 lineal feet of canopy was installed along the sidewalks to protect pedestrians, and over 400 feet of mast supported platforms were used. All work which generated noise was performed during off-hours and on weekends to not disturb the building's tenants.

**Repair Execution**

Sequencing of the facade condition assessment and repair work required strategic planning and communication involving the contractor, engineer/architect and the owner. The repairs predominately consisted of concrete rehabilitation, terra cotta replacement, and complete facade coating after the concrete repairs. Traditional vertical concrete repairs utilizing galvanic anodes, supplemental reinforcement and repair mortars were performed. Other specific repairs included rout and seal of concrete cracks, fenestration perimeter sealant replacement, rebuilding masonry, and re-pointing of masonry joints. In total, over 7,500 square feet of concrete removal and replacement were performed, over 1,700 embedded galvanic anodes were installed, approximately 29,000 lineal feet of supplementary reinforcement was installed within the concrete patches, and over 617,000 pounds of concrete repair material was installed. Additionally, 120 terra cotta pieces were removed and replaced throughout the facade. The facade restoration project began in 2018 and was completed within 18 months.

# PEOPLE ON THE MOVE

Lance Construction Supplies is excited to announce the opening of our second distribution center located at 3060 S. Calhoun Rd., New Berlin, WI 53151. As Lance nears completion of the setup work, which includes office renovation, warehouse set up and inventory placement, Lance plans on being open and operational no later than the end of April 2020.

Lance continues to be the leader in sales and service of all masonry, concrete, and restoration accessories required for any project. In business and at the same location at 4225 W. Ogden Ave., Chicago IL 60623 since 1943. We will continue that tradition of sales and service at our new location and look forward to working with all contractors

Heading up the New Berlin, Wisconsin office will be Dave Cooper. Dave has been with Lance for 31 years and although his Lance Chicago location responsibilities will remain unchanged, this will be a complete relocation for him and his family. As always, Lance will continue to service the customer from Chicago, but now will be able to service new customers from our Wisconsin location.

Dave Cooper can be reached at  
773-339-1615  
davec@lanceconstruction.com

Ralph Brown has decided to retire at the end of March, after over 40 years in the restoration industry. Ralph has spent the last 20 years as vice-president of National Restoration Systems. His many contributions include past president of the ACI Chicago Chapter and voting member of ACI Committees 312 Parking Structures and 515 Protective Systems for Concrete. He has been directly involved with several international award-winning projects. And has worked with the some of the finest contractors, tradesmen, manufacturers and engineers in the industry, across the country. We would like to thank Ralph for sharing his knowledge and experiences with us. Happy hunting and fishing Ralph!

## 2020 ICRI CHICAGO CHAPTER "LEE SIZEMORE SCHOLARSHIP FUNDRAISER" GOLF OUTING

Please come join us for a day of golf (and hopefully sun) with fellow ICRI members, friends and industry cohorts. This is a great opportunity to pair up with colleagues and clients to network. The 18-hole best ball tournament will start early in the morning and a lunch will be served after the completion of the rounds. There will be prizes for the team low score, longest drive, and longest putt winners for both courses. Raffle tickets will be sold to raise money for the 2020 Lee Sizemore Scholarship and to have the opportunity to win prizes. We hope to make this the most successful year in honor of Lee Sizemore for all his time and effort he contributed to the ICRI Chicago Chapter.
